- Associated with narcolepsy
- Used in shift work sleep disorder
- May be used for sleep-apnea-related sleepiness
- 100 mg dosage strength
- Should be used under medical supervision

MODAMINDfuels

INTRODUCTION

Modalert 100 mg contains modafinil, a wakefulness-promoting medicine used to manage excessive daytime sleepiness associated with certain sleep disorders. It works through several brain pathways involved in wakefulness and alertness and should be taken according to healthcare professional guidance.

MODAMINDfuels

COMPOSITION

1. The active ingredient is modafinil, a wakefulness-promoting agent designed to help manage excessive daytime sleepiness associated with specific sleep disorders when prescribed appropriately.

2. The tablet also contains croscarmellose sodium, lactose monohydrate, povidone, microcrystalline cellulose, magnesium stearate, and pregelatinized starch as formulation ingredients.

MODAMINDfuels

MECHANISM

Modafinil promotes wakefulness through effects on dopamine transporters and other neurotransmitter systems, including pathways involving orexin, histamine, norepinephrine, and serotonin.

MODAMINDfuels

USES

Modalert 100 mg may help manage excessive daytime sleepiness associated with narcolepsy, supporting wakefulness during normal daytime activities when prescribed by a healthcare professional.

It may be prescribed for excessive sleepiness related to shift work sleep disorder, helping affected individuals maintain wakefulness during their scheduled working hours.

MODAMINDfuels

BENEFITS

Modalert 100 mg is primarily used to promote wakefulness and reduce excessive daytime sleepiness. Its clinical purpose is managing sleepiness associated with specific sleep disorders rather than providing general energy enhancement.

MODAMINDfuels

SAFETY PRECAUTIONS

Commonly reported effects include headache, insomnia, anxiety, nausea, dizziness, nervousness, and dry mouth. Modafinil can interact with several medicines and may affect hormonal contraceptives. Serious allergic, cardiovascular, psychiatric, or skin reactions require prompt medical attention.

MODAMINDfuels

CONCLUSION

Modalert 100 mg is a modafinil-based wakefulness-promoting medication used for certain sleep disorders involving excessive daytime sleepiness. Because it can cause side effects and interact with other medicines, appropriate medical guidance, precautions, and dosing instructions are important.
